Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Size Exclusion Chromatography competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Size exclusion chromatography is a chromatographic method that separates molecules based on their size. This method uses a chromatographic column filled with a porous medium. Large molecules cannot enter the small pores and elute earlier, while small molecules enter the pores and stay longer, thus achieving separation. SEC is widely used in molecular weight determination, purification and homogeneity analysis of samples such as proteins, polysaccharides and polymers.

The global Size Exclusion Chromatography market size was estimated at USD 308.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.00% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Size Exclusion Chromatography market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
