Report Overview:

Size exclusion chromatography (SEC), also known as gel filtration, is the mildest of all the chromatography techniques. SEC separates molecules by differences in size as they pass through a resin packed in a column. Unlike techniques such as ion exchange chromatography (IEX) or affinity chromatography (AC), molecules do not bind to the chromatography resin, which means that buffer composition does not directly affect resolution (the degree of separation between peaks). Consequently, a significant advantage of SEC is that conditions can be varied to suit the type of sample or the requirements for further purification, analysis, or storage without altering the separation.

The Global Size Exclusion Chromatography Resin Market Size was estimated at USD 450.98 million in 2023 and is projected to reach USD 673.01 million by 2029, exhibiting a CAGR of 6.90% during the forecast period.
