Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Sizing Agents for Paper and Board competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Sizing agents for paper and board are chemical substances applied during the papermaking process to enhance the surface properties of the produced sheets. These agents primarily serve to control the paper's absorbency and improve its resistance to water, which is crucial for optimizing printability and achieving desired performance characteristics. Sizing agents create a protective barrier on the paper fibers, reducing the penetration of liquids and preventing excessive spreading of ink during printing. Common sizing agents include both internal sizing agents added to the pulp and surface sizing agents applied directly to the paper web. Internal sizing agents are often alkyl ketene dimer (AKD) or rosin-based, while surface sizing agents may include starch or other polymers. The choice of sizing agent depends on the specific requirements of the paper grade being produced, such as writing, printing, or packaging papers. Overall, sizing agents play a vital role in tailoring the properties of paper and board to meet the diverse needs of end-users. The market for sizing agents used in paper and board production is driven by the growing demand for high-performance packaging and printing materials with enhanced strength, printability, and moisture resistance. As industries shift toward sustainable and biodegradable paper-based alternatives to plastic, manufacturers are focusing on improving paper surface characteristics using both internal and surface sizing agents. Key trends include the increasing adoption of eco-friendly and synthetic-free formulations, as well as innovations tailored for high-speed paper machines. Regulatory pressures and consumer demand for sustainable packaging further influence product development, pushing suppliers to offer more efficient, low-emission sizing solutions that align with

environmental standards.

The global Sizing Agents for Paper and Board market size was estimated at USD 615.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
