Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Skateboard Chassis competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A skateboard chassis is a type of configuration for automotive chassis, now used mostly for electric vehicles. The skateboard chassis includes a base structure or a platform, which houses the batteries, electric motors and other electronic components fundamental to an electric vehicle. It also has removable and replaceable corner units at the wheels, into which the suspension, steering, powertrain and braking functions are embedded. The skateboard chassis is regarded as the development of CTC (Cell-to-Chassis) Technology, which is based on the fact that the skateboard platform not only integrates the battery into chassis, but also changes the traditional mechanical system, and adopts the drive-by-wire technology to realize the complete separation and decoupling of the auto body and chassis. That is to say, the skateboard platform itself can independently complete driving operations such as driving, steering, braking, etc., and can also realize automatic driving in some degree. Skateboard chassis can cut down the cost and complexity of manufacturing and production of electric vehicles, as it is a self-contained platform, with all the necessary driving and electronic components integrated into it, and which can be mounted with a variety of bodies after scaling them into various sizes. The skateboard allows an automaker to design and manufacture vehicles in several vehicle categories and body segments without engineering each one independently. From the perspective of product type, the Skateboard Chassis with a wheelbase of above 3000mm and less than 2550mm are currently the most popular in the market. The global market size in 2024 was US \$ 2,058.13 million and US \$ 2,061.26 million respectively, accounting for 48.90% and 48.98%. From the perspective of product application, the Commercial Vehicle is the largest segmented market. The

global market size was 2.70 billion US dollars in 2024, accounting for 64.22%. The Skateboard Chassis adopts a highly integrated design, allowing automotive OEM companies to develop vehicles according to different needs. The same skateboard platform can be either a sedan or an SUV, and can also be expanded in size and components for skateboard platform, such as length, width, wheelbase, motor, battery, etc., which can be changed. This flexibility enables car companies to quickly respond to market changes, meet personalized consumer needs, and achieve rapid iteration and diversified development of vehicle models. The Skateboard Chassis, with its highly integrated and modular advantages, effectively reduces costs and research and development cycles, optimizes internal space, improves handling and safety, and adapts to the future development trend of automobiles. These advantages make Skateboard Chassis one of the important directions for future automotive development.

The global Skateboard Chassis market size was estimated at USD 4209.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 26.50% during the forecast period.
