Abstracts

Skeletal muscular relaxants are a class of pharmaceutical agents used to alleviate muscle spasms, stiffness, and pain associated with musculoskeletal conditions such as back pain, fibromyalgia, multiple sclerosis, and spinal cord injuries. These drugs function by either acting centrally on the nervous system to reduce muscle tone and involuntary contractions or peripherally by directly interfering with muscle contraction at the neuromuscular junction. They are commonly prescribed as adjunctive therapy alongside physical therapy, analgesics, or anti-inflammatory medications to improve mobility and comfort. The market encompasses both prescription-based products, such as benzodiazepines, baclofen, and tizanidine, and over-the-counter options, including topical formulations with ingredients like menthol or camphor, catering to a spectrum of acute and chronic muscular disorders.

The global Skeletal Muscular Relaxants market size was estimated at USD 5650.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
