Abstracts

Skid resistant coatings, also known as anti-slip or non-slip coatings, are specialized surface treatments designed to increase traction and reduce the risk of slips and falls by incorporating abrasive particles or textured finishes that enhance friction underfoot. These coatings are typically applied as liquid or epoxy-based formulations that cure to form a durable, wear-resistant layer, and they are engineered for use on a variety of substrates?including concrete, wood, metal, and tile?in both interior and exterior environments. Key characteristics often include resistance to water, oils, chemicals, and heavy foot or vehicular traffic, making them essential for safety compliance in industrial, commercial, and residential settings where slippery conditions pose hazards.

The global Skid Resistant Coatings market size was estimated at USD 750.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
