Abstracts

Skin Barrier Applicators are specialized medical devices designed to create a protective, adhesive seal around stomas during ostomy care, safeguarding peristomal skin from corrosive effluent by securely attaching ostomy pouches while allowing for controlled, leak-free management of waste output. These devices consist of moldable, skin-friendly barrier rings, pastes, or sheets that conform to individual body contours, often incorporating hydrocolloid or polymer-based materials to provide both adhesion and skin protection. Their primary function is to maintain skin integrity, enhance pouch adherence, and improve quality of life for ostomy patients by preventing complications such as irritation, erosion, or infection.
