Report Overview:

Microbiome modulation enables us to select and combine beneficial bacteria within skincare products in order to rebalance a diseased skin microbiome. Microbiome forms an integral part of any human being. The presence is of paramount importance in all cavities of the human body and on our skin. Skin microbiome keep the organ from malfunctioning and assist in a variety of functions like sweat production, temperature maintenance among others. For years, the microbiome has been targeted as a source of potential infection by personal care products. But focus is shifting from working against them to working with them.
