Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Slab Polishing Line competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Global slab polishing line sales in 2024 will reach approximately 1,150 units, with an average unit price of approximately US\$95,000 per unit and a gross profit margin of approximately 27%-31%. Slab polishing lines are automated production equipment used for precision grinding and gloss finishing of surface materials such as stone, ceramic, and artificial stone. Typically consisting of a conveyor platform, a grinding head module, a spray and cooling system, and an automatic control unit, they enable continuous production from coarse grinding and fine grinding to mirror polishing. They offer high efficiency, consistent performance, and controllable surface quality, making them widely used in high-end architectural decoration, furniture countertops, tombstones, and handicraft processing. In a typical application scenario, a comprehensive stone processing plant typically has two to four polishing lines. MKS Mermer Kesme has an annual production capacity of approximately 90 units, primarily supplying the Turkish, Middle Eastern, and European markets, maintaining its competitive position in the mid-to-high-end stone processing equipment market. The upstream involves conveyor chain and tower circulation furnace manufacturers, precision motors, diamond abrasives and stainless steel frame material suppliers; the downstream covers comprehensive stone processing plants, building curtain wall companies, home decoration panel manufacturers and international stone exporters.

The global Slab Polishing Line market size was estimated at USD 109.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
