### Report Overview

Slab presses are machines used in the ceramics industry to create slabs of clay. These machines consist of a large flat surface, typically made of metal, where a piece of clay is placed. The press then applies pressure to the clay, compressing it and creating a flat slab of even thickness. Slab presses are commonly used in pottery and sculpture to create tiles, plates, and other flat clay forms. They are often preferred over traditional hand-rolling methods as they provide consistent thickness and save time and effort.
