Abstracts

The slatted floor system in poultry farming refers to a flooring structure composed of evenly spaced, parallel slats or bars that form the surface on which the birds walk and rest. Typically, these slats are constructed from materials like plastic, metal, or concrete.According to the Food and Agriculture Organization of the United Nations, food from livestock contributes 34 percent of protein and 17 percent of calorie intake in the global diet. With a projected world population of 10 billion by 2050, demand for livestock products is projected to grow by 39%. The OECD estimates that world meat production will increase by 5% in 2021 to approximately 339 million tons, and imports will reach 40 million tons. Major meat exporting countries such as Brazil, the European Union and the United States will meet most of the import demand. Meat consumption is expected to continue to increase in the coming years as population and per capita income grow.
