Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Slide Bearings With Flange competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Slide Bearings with Flange output reached 18.4 billion pieces versus 23 billion in capacity, with average unit price USD 0.12, with manufacturers averaging a 30% gross margin. Slide Bearings with Flange are low-friction linear motion elements that combine a cylindrical sliding bushing with an integrated mounting flange (round, square, or oval) to allow easy bolt-on installation into machinery, providing smooth reciprocating or oscillating motion under radial loads. They are typically made from sintered bronze, PTFE-lined steel, polymer composites (POM, PA, UHMW-PE), or oil-impregnated metal sleeves, and the flange ensures axial positioning without additional retainers. The supply chain begins with upstream raw materials such as bronze powders, carbon steel tubing, PTFE resins, engineering plastics, and lubricants; midstream processes include powder metallurgy sintering, PTFE/metal composite lamination, precision machining, injection molding, and bushing/flange assembly; downstream stages involve OEM bearing makers and motion-system suppliers integrating flanged slide bearings into equipment such as automation machinery, packaging lines, conveyors, automotive linkages, medical devices, furniture mechanisms, and industrial tools.

The global Slide Bearings With Flange market size was estimated at USD 2208.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
