## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Slideway Lubricant Oil competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Slideway lubricant oil is a type of high-adhesion lubricant designed specifically for machine tool guide rail systems. It is used to form a stable oil film between sliding mating surfaces such as sliding guide rails, linear guide rails, and cross roller guide rails to prevent creep, stick-slip and wear, and ensure positioning accuracy and motion stability. This type of lubricant usually uses a high viscosity index base oil, adds extreme pressure anti-wear agents, antioxidants and adhesion enhancers, and has good anti-emulsification and metal affinity. It is especially suitable for low-speed and heavy-load sliding parts of high-precision machine tools such as CNC machining centers, gantry milling machines, lathes, and grinders. According to the internationally accepted classification, common viscosity grades include ISO VG 32, VG 68 and VG 220, which can match guide rail systems with different load and speed requirements. Typical guide rail lubricants must also have good separation from cutting fluids to avoid emulsification contamination and reduced lubrication performance.

The global Slideway Lubricant Oil market size was estimated at USD 177.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
