## Abstracts

Slip ring rotating connector is an electrical connection device used to transmit current, signal or data between a rotating part and a fixed part. It consists of a fixed part (stator) and a rotating part (rotor), and achieves continuous conduction by sliding contact, allowing the device to maintain a stable electrical connection while rotating 360 degrees without restriction. Slip Ring Rotating Connector is widely used in wind turbines, robots, radars, medical equipment, automated machinery and other systems that require continuous rotation and need to maintain electrical signals or data transmission. It is designed to support power, analog signals, high-speed data transmission and even fiber optic communication. Metal contacts, liquid metal or fiber optic slip ring technology can be used according to application requirements to improve reliability, reduce signal interference and extend service life.
