Report Overview

A sludge mixer is to optimize the mixture of organic and inorganic flocculants and watery suspensions with different concentration. The mixer can also be mounted in which different media streams to be mixed before the flocculant is added. Flocculant added immediately before the mixer via a tangential injektorring with nozzles and mixed to a homogeneous suspension. Flocculation reaction which occurs immediately after the flocculation agent addition is significantly affected by the energy (turbulence) that occurs in the mixer.
