## Abstracts

Sludge solidifying agent is a functional material used to treat and stabilize sludge. It can reduce the water content of sludge, improve its mechanical properties, and reduce the loss of harmful substances through physical, chemical or biological effects. Its main components include hydraulic cementitious materials (such as cement, lime), fly ash, polymers, etc. It can react with the water and organic matter in the sludge to solidify it into a stable form, which is convenient for transportation, landfill or resource utilization. It is widely used in the treatment of municipal sludge, industrial sludge and contaminated soil.

The global Sludge Solidifying Agent market size was estimated at USD 893.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.30% during the forecast period.
