Abstracts

A slump cone concrete tester is a standardized field instrument used to measure the workability or consistency of freshly mixed concrete by determining its slump value?the vertical settlement of a concrete sample after the removal of a frustum-shaped metal mold. This test, governed by standards such as ASTM C143 and EN 12350-2, involves filling the cone in layers, rodding each layer, lifting the cone vertically, and measuring the decrease in height of the concrete mass. The resulting slump value indicates the fluidity and ease of placement of the concrete, helping to assess whether the mix meets specified design requirements for water content, cohesion, and overall quality before placement and curing.

The global Slump Cone Concrete Tester market size was estimated at USD 87.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.15% during the forecast period.
