Report Overview

The Slurry Balanced Shield Machine, also known as a Slurry TBM, is a type of tunnel boring machine used in soft ground conditions, such as clay, silt, and sand. It utilizes a slurry system to maintain stability during tunnel excavation. The machine pressurizes a mixture of bentonite or other additives and water, creating a thick slurry. This slurry is injected into the cutterhead chamber, balancing the pressure within the excavation face to prevent ground collapse. The excavated material is then transported back through the machine via the slurry system. Slurry Balanced Shield Machines are commonly used in projects like subway construction, underground pipelines, and water tunnels.
