### Report Overview

Slurry Tunnel Boring Machine is a large piece of machinery used in tunneling to excavate materials such as soil, rock, sand and mud through underground tunnels. It usually consists of a rotary cutter head, a cutter head, a propulsion system, a control system and a mud supply system. The cutter head of the Slurry Tunnel Boring Machine is equipped with cutter heads and knives, which can remove material such as soil and rock and transfer it to the propulsion system behind. The propulsion system can transport the chipped material to the ground or in a transport vehicle in a tunnel. The mud supply system can inject mud to cool the cutter head, reduce friction, stabilize the tunnel wall, and transport the removed material such as soil and rock out of the tunnel.
