Small bone and joint orthopedic surgery is a procedure that replaces bones and structures lining the joints with new components such as fixation or support devices. This procedure is necessary when the articular cartilage is damaged or worn out, which disrupts the gliding movements of bones. New components may be made from metal, plastic, or carbon-coated materials. They allow the joints to move again without pain, increase the range of motion, and improve the appearance of joints. Shoulder, elbow, wrist, and foot and ankle joints are commonly replaced.
