Abstracts

Small cells are low-powered radio access nodes, and they operate in licensed bands. These are used in indoor and densely populated areas to provide better wireless network coverage. The coverage area of small cells varies from more than 32 feet to a few miles, which is comparatively less than that of mobile macrocells. The types of small cells that are commonly used by telecom operators globally include femtocells, picocells, microcells, and metrocells. Small cell base stations play an important role in expanding the capacity of wireless networks. During 2017, the 3G small cell segment dominated the small cell market and accounted for a major part of the overall market share. Such dominance in the market is due to the rapid growth in shipments and deployment of 3G small cells in the global market. The demand for 3G small cell is predominantly from developed regions such as the US, Japan, South Korea, China, and Western Europe.

The global Small Cells market size was estimated at USD 6064.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 20.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Small Cells market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
