Report Overview

Small hole EDM machine refers to a machine tool that uses the principle of electrical discharge machining to process holes smaller than 5 mm. For processing small and medium-sized molds, the processing characteristics of small hole drilling machines are not limited by the hardness of metal materials. The template of the small hole drilling machine can first be processed with the small hole quenching CNC EDM machine to produce the required hole shape to ensure quality and improve service life. The EDM small hole machine uses a continuously moving filament (called a wire electrode) as an electrode to perform pulsed spark discharge on the workpiece to remove metal and cut it into shape. Unlike wire cutting machines and molding machines, the electrodes for electrical pulses are hollow copper rods. The medium is discharged from the workpiece through the copper rod hole, corroding the metal to achieve the purpose of perforation. It is used to process pores of super-hard steel, carbide, copper, aluminum and any conductive material. At present, typical products include Makino's EDFH series, Sodick's K series, etc.
