Abstracts

Small modular reactors (SMRs) are a type of nuclear fission reactor which are smaller than conventional reactors, and manufactured at a plant and brought to a site to be assembled. The International Atomic Energy Agency (IAEA) defines "small" as under 300 MWe. This report focus on Small modular reactors (SMRs) market.As a SMR is fully built in a factory using module fabrication, high production rate can be achieved. SMRs are still in the design phase. In fact, only three SMRs are currently in the advanced regulatory phase: NuScale's Power Module, GE-Hitachi's BWRX 300, and Terrestrial Energy's Integral Molten Salt Reactor. SMRs can be made to operate underground or as a floating nuclear power unit. Modular reactors are primarily used for electricity generation; however, it is also used in seawater desalination and process heating. SMR designs promises an affordable, safe, viable, and non-greenhouse gas emitting energy.
