Abstracts

Small-molecule APIs refer to drug molecules with relatively small chemical structures, which are often used to prepare active ingredients of pharmaceuticals. They are usually synthesized by organic synthesis methods, have clear chemical structures and activities, and can enter the human body through pharmaceutical preparations and exert therapeutic effects. Intermediates are intermediate compounds produced during the synthesis of small molecule APIs. They are important chemical intermediates connecting different steps of the synthetic pathway, and the final small molecule APIs are gradually synthesized through a series of chemical reactions. The synthesis and purification of intermediates is a key step in the drug synthesis process, ensuring the high efficiency, selectivity and yield of the synthetic route.

The global Small Molecule Api And Intermediates market size was estimated at USD 6850.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.15% during the forecast period.
