## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Small Outline DIMM (SODIMM) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Small Outline DIMM (SODIMM) is a small memory module widely used in laptops, compact desktops, and other devices with limited space. Compared with standard DIMMs (dual in-line memory modules), SODIMMs are smaller in size, usually 67.6 mm in length and 30 mm in width, suitable for small computer systems. SODIMM supports multiple memory technologies, such as DDR2, DDR3, DDR4, and the latest DDR5, with different pin counts (such as 204-pin DDR3 and 260-pin DDR4). Its main advantage is that it saves space while providing enough performance to meet the memory needs of mobile devices. SODIMM modules usually have lower voltage and smaller capacity, and can be used to increase the memory expansion capabilities of laptops and improve system performance. Currently, the global Small Outline DIMM (SODIMM) market is experiencing significant growth, mainly driven by strong demand for mobile computing devices (such as laptops, mini PCs), industrial embedded systems and edge computing devices. With the popularization of artificial intelligence applications, the acceleration of high-performance thin and light notebook upgrades, and the expansion of smart terminals driven by 5G and the Internet of Things, the market demand for high-bandwidth, low-power DDR5/LPDDR5 SODIMMs continues to rise. Technology iteration has become the core focus of competition. Mainstream manufacturers are accelerating their evolution towards higher frequencies (such as 6400MT/s), larger capacities (single 32GB and above) and lower voltages (1.1V). At the same time, the penetration rate of LPDDR (low power) specifications in mobile scenarios is rapidly increasing. Although the consumer electronics market has cyclical fluctuations and faces replacement pressure from onboard memory and unified memory

architecture (such as Apple's M series chips), the upgrade of industrial control equipment driven by enterprise digital transformation, the performance competition of gaming notebooks, and the expansion of edge server deployment still provide continuous momentum for the SODIMM market. The competitive landscape is dominated by storage giants such as Samsung, SK Hynix, and Micron, but Chinese manufacturers are actively increasing their share through technological breakthroughs. In the next few years, with the popularization of AI PCs, DDR5 penetration exceeding 50%, and the growth in industrial automation demand, the SODIMM market is expected to maintain steady growth.

The global Small Outline DIMM (SODIMM) market size was estimated at USD 3106.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
