Report Overview

A gasoline engine is an engine that uses gasoline as fuel to convert internal energy into kinetic energy. Because gasoline has low viscosity and evaporates quickly, the gasoline injection system can be used to inject gasoline into the cylinder, and after compression reaches a certain temperature and pressure, it is ignited with a spark plug to make the gas expand and do work. The characteristics of gasoline engines are high speed, simple structure, light weight, low cost, smooth operation, and easy use and maintenance. Gasoline engines are widely used in cars, especially small cars.
