Abstracts

Small RNA Sequencing Service is a next-generation sequencing (NGS)-based molecular biology service designed for the comprehensive profiling and analysis of small RNA molecules, including microRNAs (miRNAs), small interfering RNAs (siRNAs), and PIWI-interacting RNAs (piRNAs). The service involves total RNA extraction from tissues, cells, or body fluids, construction of small RNA libraries, high-throughput sequencing, and bioinformatics analysis for quantification, identification, and functional annotation. It is widely applied in gene regulation studies, biomarker discovery, developmental biology, oncology, and pharmaceutical research. Compared to traditional detection methods, small RNA sequencing offers higher sensitivity, broader dynamic range, and the ability to discover novel small RNAs without prior sequence knowledge. A high-quality service typically includes RNA quality assessment, library preparation, sequencing, differential expression analysis, target prediction, and pathway enrichment, making it a powerful tool for non-coding RNA research and transcriptomics.

The global Small RNA Sequencing Service market size was estimated at USD 1137.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.70% during the forecast period.
