Report Overview

One issue faced by the oil and gas industry was the transportation of gas. Eventually, liquefaction of gas became the norm of the industry to reduce its volume and transport it efficiently. Conversion of natural gas from gaseous to liquid form by decreasing its temperature is known as liquefied natural gas (LNG).

The roadways market segment accounted for about 70% of the total market shares and dominated the industry. Roadways account for approximately one-fifth of the GHG emissions which have induced governments to promote the use of natural gas. Several countries have started adopting the usage of SSLNG as a replacement for diesel as the preferred fuel for long-haul trucks due to its low GHG emissions. Countries such as China and the US have already started adopting the usage of natural gas for automobiles on a large scale and the next few years will see a number of countries following this trend which will drive the growth of the market in this segment.
