Abstracts

A Smart Authentication Identification Card is a secure electronic credential embedded with a microprocessor or secure chip that enables identity verification, access control, and secure transactions. Unlike basic ID cards, it supports cryptographic operations, data encryption, and sometimes multi-factor authentication, ensuring that only authorized users can access systems, facilities, or digital services. These cards are widely used in corporate access management, government ID programs, financial transactions, and secure IT system logins. They can be contact, contactless, or dual-interface, depending on the communication method with readers. Smart Authentication Cards enhance security, reduce fraud risk, and provide traceable access records for audit and compliance purposes.
