## Abstracts

A smart blood glucose monitoring patch is a wearable medical device that is usually attached to the skin through a micro sensor to monitor the wearer's blood glucose level in real time. This patch is able to obtain blood glucose data through skin penetration and transmit it to a smart device (such as a mobile phone or tablet) through wireless technology (such as Bluetooth) for real-time analysis by the user or doctor. Smart blood glucose monitoring patches are generally more convenient and painless than traditional blood glucose monitoring methods (such as fingertip blood drawing) and are widely used in long-term blood glucose monitoring and management of diabetic patients. Designed to provide continuous, real-time blood glucose level data to help diabetic patients better control their blood glucose in daily life and avoid the risk of high or low blood sugar. Many smart blood glucose monitoring patches can also be synchronized with mobile applications or health platforms to provide data analysis, trend tracking and personalized health advice.
