## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Smart Card Personalization System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Smart Card Personalization System is an integrated solution?hardware, software, and workflow?that customizes blank smart cards with unique user data before issuance. In this process, cards are physically and electronically ?personalized?: information such as names, photos, PINs, account numbers, or biometric identifiers is printed, laser-engraved, or embossed on the card surface, while secure digital credentials are encoded onto the embedded chip or magnetic stripe. These systems are widely used by banks, telecoms, governments, and enterprises to issue payment cards, SIMs, ID cards, and access badges. They typically include modules for printing, encoding, quality inspection, and key management, ensuring high security, compliance with standards (e.g., EMV, ISO/IEC 7816), and large-scale, efficient card production. About 400 systems are sold each year, and the price of the system varies greatly depending on the throughput size, with the price of medium-throughput systems being around US\$150,000.

The global Smart Card Personalization System market size was estimated at USD 115.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
