## Abstracts

Smart coercimeters are high-precision instruments used to measure the magnetic properties of materials, especially coercivity (also known as the coercive field). Coercivity refers to the reverse magnetic field required to reduce the magnetization of a magnetic material to zero. Smart coercimeters integrate advanced digital technology and automation features, providing more efficient and accurate measurement results. Typically, they come with a user-friendly interface, allowing operators to quickly view and record data. These instruments find wide applications in scientific research, industrial production, and materials science, particularly for studying and evaluating the magnetic properties of different materials, hysteresis loop analysis, and quality control of magnetic materials.

The global Smart Coercimeters market size was estimated at USD 105.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
