### Report Overview

Smart T&D equipment transfers electricity from the transmission system to the consumer delivery point. Such equipment improves the overall efficiency of the smart grid, minimizes technical losses, improves O&M, and improves the longevity of the T&D equipment, deferring the investment and allowing grid operators to monitor and control the functions of the grid from a remote location. Smart T&D equipment includes reclosers, fault current indicators, automated switches, Volt-VAR control equipment, synchrophasor, and HVDC, among Others.

The global smart grid transmission and distribution (T&D) equipment market to grow at a CAGR of more than 13.5% over the forecast period. One of the primary factors driving the growth of this market is the rapid modernization of grid. An aging power infrastructure, need for mitigation of cybersecurity risk, and the addition of new resources to the grid have resulted in the electricity and power sector to find ways to make the grid more reliable and flexible to suit the rapid changes in the supply and demand. This has led to the modernizing of the grid by implementing smart grids that use digital and information technology to manage the power flow efficiently. Moreover, according to the International Energy Agency significant investments are made for the refurbishment and replacement of the T&D infrastructure, thereby propelling the growth prospects for this market in the coming years.
