## Abstracts

A smart heart health patch is a wearable medical device that is usually attached directly to the skin in the form of a patch to monitor the wearer's heart health status in real time. This patch integrates sensors and wireless technology to monitor important heart health indicators such as electrocardiogram (ECG), heart rate, heartbeat variability, and transmits data to a smartphone or other device via Bluetooth or other wireless methods for analysis by users and doctors. Smart heart health patches can help people better understand their heart health and detect potential heart problems in advance. They are especially suitable for long-term health monitoring of heart patients.
