Abstracts

In 2024, global sales of Smart Living Room Solution reached approximately 2.4 million units, with an average market price of about USD 1,500 per unit, an annual production capacity of roughly 2.9 million units, and an industry-average gross margin of approximately 24%. A Smart Living Room Solution is an integrated system solution that brings together audiovisual, lighting, environmental control, security, interaction, and connectivity functions within the living room space. It comprises components such as smart TVs, speaker systems, environmental sensors, intelligent lighting, motorized curtains, voice assistants, and a home gateway, all working collaboratively to deliver a unified ?view, listen, light, temperature, safety, control? experience. Users can trigger scene modes via voice, mobile apps, or presets: automatically adjusting lighting intensity and color, window coverings, media playback, and ambient settings when entering the room. In the supply chain, upstream includes chipset suppliers (SoC, Wi-Fi/Bluetooth/Zigbee/Matter), optical and sensor module vendors; while the downstream targets end-consumer households, smart home installers, and property management operators. The cost structure typically breaks down as: hardware (chipssets, modules, sensors, enclosures) ~ 40%?50%, software development & system integration ~ 20%?25%, logistics & installation ~ 10%?15%, with after-sales and marketing consuming the remaining share. Regarding downstream consumption volume: assuming each household uses one smart living room system, and a target market of 10 million households, full penetration implies demand for 10 million units; with a current adoption rate of 10%, the annual incremental consumption would be about 1 million units.

The global Smart Living Room Solution market size was estimated at USD 3600.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
