Abstracts

Smart medical patches are wearable medical devices that integrate sensors, electronic components, and wireless communication technologies, and are usually used to monitor, diagnose, or treat certain health problems. They can monitor physiological signals (such as heart rate, body temperature, blood sugar, etc.) in real time by attaching them to the skin, and transmit data to smart devices (such as mobile phones, tablets, or computers) for analysis through wireless networks (such as Bluetooth, Wi-Fi, etc.). Some smart medical patches can also implement specific treatments, such as drug release, pain management, etc., covering multiple areas from chronic disease monitoring to sports health management. Due to their portability, non-invasiveness, and efficient real-time data monitoring capabilities, smart medical patches have gradually become an important part of the medical industry.
