## Abstracts

Smart oil fields are based on the Internet of Things to realize real-time collection and sharing of data. They use rich underground data resources to conduct real-time global analysis of oil field production, and use data resources such as exploration, development, and engineering to achieve integrated collaboration in geological engineering. Deep learning and continuous iteration promote the sustainable green development of oil fields. Smart oilfields, a product of the integration of the traditional oil and gas industry with digital technology, are becoming a crucial tool for promoting efficient oilfield development, cost reduction, efficiency improvement, and safety management. By deploying technologies such as IoT sensors, edge computing, cloud platforms, AI analytics, and digital twins, smart oilfields enable real-time monitoring, predictive maintenance, and automated control across the entire oil and gas production process, significantly improving resource utilization efficiency and operational safety. Amidst the global energy transition and increasing pressure on carbon emissions, smart oilfields are becoming a key enabler for technological upgrades and green transformation for large oil companies. From a market development perspective, smart oilfields possess strong growth potential, particularly in regions such as the Middle East, China, and North America, where oil and gas resources are abundant but extraction costs or safety challenges are high. Future market growth will be driven by multiple factors, including the demand for digital transformation of older oilfields, the integration of new energy hybrid production scenarios, and national policies supporting energy security and intelligent manufacturing. Furthermore, with the maturity of private clouds, industrial AI platforms, and edge intelligent devices, the construction cost of smart oilfields is decreasing, enabling small and medium-sized oil companies to participate, and the market size is expected to continue to expand.

The global Smart Oil Field market size was estimated at USD 589.0 million in 2025 and

is projected to grow at a compound annual growth rate (CAGR) of 12.00% during the forecast period.
