Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Smart Pet Feeder and Drinker competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Smart pet feeders and waterers are automated pet care devices built using modern technologies such as the Internet of Things and artificial intelligence, aiming to provide pets with more scientific and convenient diet management solutions. These devices solve many pain points of traditional feeding methods through intelligent functions and are reshaping modern pet-raising methods. In this era, almost everyone wants to keep pets at home because they believe that keeping pets at home can relieve the stress, boredom and loneliness of daily life. However, in developing countries, citizens' activity levels are very high, and they often neglect to provide food and water to pets, so that they do not get timely attention. Because they are busy with various activities, they rarely have time to supervise pets at home. Providing food to pets in adjustable quantities within a predetermined time has become an indispensable task in the current situation. The household penetration rate of the European pet market is relatively high. According to FEDIAF data, in 2020, there were about 88 million households in Europe keeping pets, and the pet household penetration rate was about 38%, a growth rate of 3.41% compared with 85 million in 2019. Cats and dogs are still the mainstream of the European pet market. In 2020, Romania and Poland are the countries with the highest pet household penetration rates in Europe, with the household penetration rate of cats and dogs reaching about 42%; followed by the Czech Republic, where the household penetration rate of cats and dogs also exceeded 40%. In recent years, with the rise of the concept of pet keeping in my country, the domestic pet industry has entered a stage of rapid development. In the future, as the concept of pet raising becomes more popular, the penetration rate of pet households

will further increase, and the size of the pet market will also increase accordingly. As people's awareness of pet care increases and the size of the pet market expands, the pet automatic feeder market is also gradually expanding. It is expected that the global pet automatic feeder market will grow further in the next few years.

The global Smart Pet Feeder and Drinker market size was estimated at USD 1142.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.80% during the forecast period.
