A smart positioning helmet is a smart wearable device based on a traditional industrial helmet, integrating a positioning module (such as GPS, Beidou, or UWB), sensors, a wireless communication module (such as 4G/5G or Bluetooth), and a built-in power supply. By acquiring and transmitting the wearer's precise location, movement status, and surrounding environmental data in real time, it enables remote monitoring of workers, trajectory tracing, electronic fence warnings, and emergency assistance. Its core purpose is to improve production safety and management efficiency in high-risk industries such as construction sites, mining, and petrochemicals. It is a key application of the Industrial Internet of Things in the field of safe production. The upstream of the industry chain of smart positioning safety helmets mainly includes core electronic components such as Bluetooth chips, sensors, batteries, integrated circuits, and suppliers of raw materials such as plastics and metals; the midstream is smart safety helmet manufacturing companies that carry out design, production and integration; the downstream is used in high-risk operations such as the construction industry, mining, oil and gas, and chemical industry, and ultimately provides these industries with real-time positioning and safety management solutions through direct sales or system integrator channels.

The global Smart Positioning Helmet market size was estimated at USD 91.0 million in
