Abstracts

The smart public toilet system is a modern public toilet management system based on the Internet of Things, sensors and big data technology. It can monitor the toilet's environmental conditions (such as odor, temperature and humidity, and traffic flow), toilet usage and consumables in real time, and realize automatic cleaning reminders, energy-saving control and operation and maintenance management through the background system, thereby improving the hygiene level and user experience of public toilets. Refined urban management is driving growing demand for smart public toilets. As urban management evolves towards digitalization and refinement, smart public toilets have become a crucial component in improving the quality of public services. The government's emphasis on livelihood projects and urban civilization indicators has led to the widespread inclusion of smart public toilets in "smart city" development. Especially in first-tier and emerging first-tier cities, leveraging big data and the Internet of Things to improve toilet experience, conserve resources, and optimize operation and maintenance costs is becoming a new standard for public toilet construction and renovation, and market potential continues to be unleashed. The integration of technology and services will become the core of industry competition. Smart public toilets are no longer simply about hardware; future market competition will shift to integrated "technology + operations" capabilities. Platform-based companies that can provide services such as data analysis, remote monitoring, intelligent scheduling, and cleaning performance evaluation will have a significant advantage in government procurement and commercial property development. Furthermore, with rising environmental protection and carbon emission standards, the integration of green concepts such as intelligent water conservation, energy consumption monitoring, and low-carbon materials will become a key competitive advantage for smart public toilet systems.

The global Smart Public Toilet System market size was estimated at USD 120.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.50% during the forecast period.
