Abstracts

Smart scenic spot solutions integrate digital technologies such as Internet of Things (IoT), big data, cloud computing, artificial intelligence (AI), and mobile applications to enhance the operational efficiency, visitor experience, and management capabilities of tourist attractions by offering features like real-time crowd monitoring, intelligent navigation, online ticketing, digital interpretation, predictive analytics for maintenance, and personalized recommendations. The global market for smart scenic spot solutions is experiencing robust growth, driven by increasing tourism demands, government initiatives promoting smart city infrastructure, and the rising adoption of contactless and seamless visitor services post-pandemic, with key players offering integrated platforms that cater to both large heritage sites and smaller natural parks seeking sustainability and revenue optimization. Market expansion is further fueled by advancements in 5G connectivity, which enable faster data transmission and more reliable IoT device integration, while challenges include high initial investment costs, data security concerns, and the need for specialized technical expertise, though these are gradually being addressed through scalable SaaS models and public-private partnerships. Regional analysis shows strong adoption in Asia-Pacific, particularly in China and Japan, due to heavy tourism footfall and government support, followed by North America and Europe, where heritage conservation and eco-tourism are prioritizing smart management tools to balance visitor engagement with environmental preservation.

The global Smart Scenic Spot Solution market size was estimated at USD 1200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
