A foot ulcer is an open wound or sore on the skin that is slow to heal and is common in people with diabetes. They can lead to other health complications, including amputations. In-shoe sensors are slim inserts designed to measure force against the bottom of the foot, identifying abnormal areas of pressure that could lead to the development of a diabetic foot ulcer. Diabetes mellitus is one of the more prevalent chronic diseases worldwide, with type II diabetes accounting for about 90% of the cases. With the deepening trend of aging population, the number of diabetes patients will continue to increase. Data shows that by 2030, the global diabetes monitoring medical devices market size will reach \$73.8 billion.
