Report Overview

As an important tool for obtaining information, sensors play a significant role in the fields of industrial production, science and technology. However, with the rapid development of microprocessor technology and the automation and intelligent development of measurement and control systems, traditional sensors have been combined with various microprocessors and connected to the network, forming information detection, signal processing, and logical thinking. A series of intelligent temperature sensors. The intelligent temperature sensor enables the sensor to develop from a single function and single detection to multi-function and multi-point detection; from passive detection to active information processing; from on-site measurement to long-distance real-time online measurement and control. Networking makes it possible for sensors to access the network nearby, and there is no need for point-to-point connections between sensors and measurement and control equipment, which greatly simplifies the connection line and facilitates system maintenance and expansion.
