Abstracts

The intelligent trash can is composed of advanced microcomputer control chip, infrared sensor detection device and mechanical transmission part. It is a new high-tech product integrating machine and optoelectronics. At 35cm, the lid of the trash can will automatically open, and the lid will automatically close after 3-4 seconds after the garbage is put in. People and objects do not need to touch the trash can, which completely solves the hidden danger of hygienic infection for users in traditional trash cans. It can effectively prevent the spread of various infectious diseases through garbage and prevent the overflow of garbage smell in the barrel. The development prospects for smart trash cans are promising as they offer various benefits in waste management and contribute to a more efficient and sustainable environment. It's important to consider factors such as initial investment costs, infrastructure requirements, and data privacy when implementing smart trash can solutions. Additionally, collaboration among stakeholders, including waste management companies, municipalities, and technology providers, is crucial for successful adoption and implementation. As technology continues to advance and awareness of environmental sustainability grows, the development prospects for smart trash cans are likely to expand, leading to improved waste management practices and a cleaner, more sustainable future.
