Smart utilities software provides assistance with configuring, managing, and monitoring internet of things (IoT) devices used in energy and utility operations. Smart technology allows utilities managers and workers to optimize resource usage and automate certain routine tasks, while simultaneously generating valuable data across the operation. Some of the future market trends of Smart Utilities Software are: The demand for Smart Utilities Software will increase as more utilities companies seek to digitalize their infrastructure and services, and to comply with environmental and regulatory standards. The COVID-19 pandemic has accelerated the digital transformation of many industries, creating more opportunities for Smart Utilities Software providers to offer their solutions. The emerging markets and shifting dynamics in the Asia-Pacific region will create new challenges and opportunities for Smart Utilities Software. The Regional Comprehensive Economic Partnership (RCEP) agreement signed in November 2020 has created the world's largest free-trade zone among 15 countries in the region, with a total population of 2.2 billion. This will increase the competition and demand for Smart Utilities Software in languages such as Vietnamese, Thai, and Indonesian. The integration of artificial intelligence (AI) and machine learning (ML) will enhance the efficiency and quality of Smart Utilities Software. AI and ML can help automate some aspects of the utility management process, such as data analysis, optimization, prediction, and anomaly detection. However, human experts and operators will still play a vital role in ensuring the reliability and security of the utility systems. The diversification of content formats and platforms will require more flexible and adaptable Smart Utilities Software solutions. Utilities companies today are not limited to traditional data sources, but also include videos, podcasts, social media, and more. Moreover, utilities systems need to be compatible with different devices, such as smartphones, tablets, laptops, and smart TVs. Smart Utilities Software providers will need to offer solutions that can handle various types of content and platforms, while ensuring a consistent and

seamless user experience across all channels.
