Abstracts

Smartphone OIS Actuators refer to the drivers used to implement optical image stabilization in smartphones. When taking photos or videos, shaking hands may cause images to blur or shake, and optical image stabilization technology can help eliminate these adverse effects, thereby improving image quality. The smartphone optical image stabilization (OIS) actuator market has grown rapidly in recent years with the continuous advancement of smartphone photography technology and the increasing demand of consumers for higher quality images and videos. Optical image stabilization technology is an indispensable part of smartphone cameras. Especially in low-light environments, it compensates for hand shake by physically moving the lens or image sensor, thereby significantly improving shooting stability and image quality. With the increasing demand for smartphone photography and the improvement of users' requirements for shooting experience, OIS actuators play an increasingly important role in smartphones, driving the booming development of related markets. The smartphone OIS actuator market is currently in a stage of rapid growth. With the continuous improvement of image quality, especially in video shooting and low-light environments, consumers' increasing demand for stability and clarity has promoted the widespread application of OIS technology. The main function of OIS actuators is to achieve image stabilization by precisely controlling the displacement of the lens or sensor. It can effectively reduce the image blur problem caused by hand shake, especially when shooting dynamic videos. As the smartphone industry moves towards thinner and lighter designs, OIS actuators have also undergone technological advances in miniaturization and integration. For example, the miniaturization of MEMS sensors and motors enables OIS actuators to adapt to more compact mobile phone structures while ensuring their high performance. In mainstream smartphones, OIS technology has gradually spread from high-end flagship models to mid- and low-end models, further driving the market demand for OIS actuators. Although the OIS actuator market is in a growth period, it also faces some challenges. First,

compared with electronic image stabilization (EIS), although OIS technology has more obvious advantages in low-light environments, it is more expensive and requires more complex hardware support. Therefore, how to reduce the production cost of OIS actuators, especially in mid- and low-end smartphones, is an important direction for future development.

The global Smartphone OIS Actuators market size was estimated at USD 136.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
