Abstracts

The smartphone camera module refers to the integrated optical assembly responsible for capturing images and videos in mobile devices, encompassing key components such as the image sensor (CMOS or CCD), lens system (often multi-element with varying focal lengths), optical image stabilization (OIS) hardware, autofocus actuators, and supporting electronics like signal processors and connectors. These modules are designed to deliver high-resolution imaging, low-light performance, and computational photography features while adhering to strict size, power, and thermal constraints inherent to smartphone design. Advanced modules increasingly incorporate multiple lenses (wide, ultra-wide, telephoto, periscope) and sensors (e.g., time-of-flight for depth sensing) within a single unit, enabling functionalities such as optical zoom, portrait mode, and augmented reality applications.

The global Smartphones Camera Module market size was estimated at USD 49000.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
