## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on SMDC Drugs competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. SMDC drugs are a class of innovative drugs that are formed by coupling small molecule targeting ligands with cell payloads through linkers. SMDC ligands bind to transporters, the drugs are internalized into the cells, and cytotoxins are released, ultimately killing tumor cells. Small molecule ligands are more likely to penetrate into tumor cells and are less likely to aggregate in the body, reducing drug toxicity.

The global SMDC Drugs market size was estimated at USD 54.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 31.60% during the forecast period.
