Abstracts

Smoke ingredients for food, also known as liquid smoke or natural smoke flavorings, are concentrated flavoring agents derived from the controlled burning or pyrolysis of wood chips or sawdust, where the smoke is captured, condensed, and purified to remove potentially harmful compounds like tar and soot, resulting in a versatile liquid or powder form that imparts the characteristic smoky, savory, and sometimes slightly sweet notes of traditional smoking to a wide range of food products without the need for actual smoke exposure, making them particularly valuable for enhancing flavor profiles in processed meats, sauces, snacks, plant-based alternatives, and ready-to-eat meals while offering manufacturers greater consistency, efficiency, and food safety compared to conventional smoking methods.
