Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Soap-based Grease competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Soap-based grease is a lubricant that is a mixture of a soap thickener and a base oil (mineral or synthetic) generated by the reaction of fatty acids with a metal base (such as lithium, aluminum, calcium, etc.). It maintains the base oil in a gel-like structure through the soap thickener, thereby providing excellent lubrication performance, mechanical stability, and protection in specific environments, such as water resistance, corrosion resistance, and high temperature stability. Soap-based grease is widely used in automobiles, industrial equipment, agricultural machinery, and other fields to reduce friction, prevent wear, and protect mechanical equipment from harsh working conditions.

The global Soap-based Grease market size was estimated at USD 1839.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.30% during the forecast period.
